OBJECTIVE

Cybersecurity and software engineer with expertise in cloud infrastructure, protocol security, and secure software development. Seeking to apply technical skills and research-driven mindset to build scalable, secure, and innovative digital solutions in industry and research environments.

WORK EXPERIENCE

Ubisoft

July 2024 – Mar 2026

Cyber Security Engineer – Full Time

Utrecht, Netherlands

- Performed GDPR and NIS2 risk assessments using JIRA and Azure Policy, mapping controls to regulatory requirements.
- Built internal security tooling in Python (Flask) and React, automating case management and SLA tracking workflows.
- Analyzed OAuth 2.0 and OIDC authentication flows via Wireshark and Burp Suite, identifying SSO session vulnerabilities in production services.

Hitech Solutions

Feb 2023 - Nov 2023

Cyber Security Engineer - Intern

Lisbon, Portugal

- Managed the Startup IT infrastructure via AWS cloud (EC2, Load Balancing, Lambda, GuardDuty) with a zero-trust security model
- Implemented enterprise-grade EPP and MDM solutions for the company's IT environment.
- Designed and deployed a custom AI-powered investigation plugin via Amazon Rekognition and Amazon Textract within the EPP system to ensure strict compliance with NDA policies.

Ste Com Prod

July 2020 - Jan 2023

Software Engineer - Contractor (Part Time)

Ariana, Tunisia

- Spearheaded the development of interactive single-page applications (SPAs) as a team lead, managing developer workflows, training junior engineers in DevOps practices, and performing QA.
- Led modernization of 10+ legacy projects by refactoring into Python Flask and NodeJS backends and redesigning frontends with React and Angular, implementing scalable architectures and DevOps pipelines to boost performance and TTM.
- Conducted regression testing in virtual environments, reducing post-launch issues by 87%.

Ministry of Social Affairs Tunisa

June 2021 - August 2021

Cyber Security Engineer - Intern

Tunis, Tunisia

- Built a Python/PHP plugin within the ministry's IT infrastructure to detect 0-day vulnerabilities in real time using NVD logs, with automated threat intelligence through SQL-driven analysis.

SKILLS

Languages	English (Full proficiency), French (Native), Arabic (Native), German (A2).
Programming	Python, JS, PHP.
Databases	MySQL, MongoDB (NoSQL).
Frameworks	Flask, React, OpenCV.
Tools	Git, Docker, Kubernetes, VSCode, JIRA, Wireshark
Cloud	AWS, Azure.
OS	MAC OS, Linux, Windows, Chrome OS.

EDUCATION

Higher Institute of Computer Science El Manar, Ariana, Tunisia 2019 - 2023
National Engineering Degree in Development of Communication Infrastructures and Services.
Graduated with Honorable Mention.
Relevant courses: Machine Learning, AI, Big Data, Data Science, Cloud Computing, Virtualization, Advanced Cybersecurity, Ethical Hacking, DevSecops, IoT, Software Engineering, Networking and CCNA, Web and Mobile Development, Software Testing and QA, Advanced Social Media Analysis.

Higher Institute of Computer Science El Manar, Ariana, Tunisia 2016 - 2019
Bachelor of Engineering in Computer Science.
Relevant courses: Data Structures & Algorithms, DBMS, OOP, Networks infrastructure and Penetration Testing, Unix Systems, Maths, Magnetoelectrical Science, Algebra and Statistics, Wave Propagation.

CERTIFICATES

CompTIA Security+ Ongoing - 2026
IBM Blockchain Certificate Feb - 2023
CCNA: Enterprise Networking, Security, and Automation Jan - 2023
CISCO Cybersecurity Essentials Nov - 2022
Advanced Python Programming Jan - 2021

PROJECTS

Finance Dashboard – Spendwise November 2024 - Present

- Created a full-stack web/mobile app using Flask and SQLAlchemy to track expenses/earnings with currency conversion, spending analytics, and automated data versioning via Git. Includes user authentication and Google charts. *Python, Flask, SQLAlchemy, Bootstrap, Git, AWS(EC2).*

Logistic Python Automated Bot – SupplyChain September 2022 - December 2022

- Created a Python-based system using predictive analytics to optimize stock replenishment, reducing stockouts by 25% and excess inventory by 30%. *Python, Pandas, NumPy.*

Security Bot for Exploit Detection – CyberGuard April 2021 - September 2021

- Developed a security bot using web scraping and machine learning to instantly alert administrators to new exploits, including 0-day vulnerabilities from the NVD. Reduced Mean Time to Detect (MTTD) vulnerabilities by 40%, significantly enhancing cybersecurity defenses. *Python, BeautifulSoup, Scikit-learn.*

LEADERSHIP & INVOLVEMENT

Events Organizer – IEEE September 2020 - Juin 2021

- enhancing member participation and promoting networking opportunities within the engineering community.

Workshops Organizer & Instructor – ISI Geeks September 2016 - Juin 2020

- Organized and instructed workshops on development and Japanese culture, fostering creativity and enhancing gaming development skills among members.

HONORS AND AWARDS

ISI 2018 Enterprise Award

ISI Enterprise Award commends an individual's outstanding networking and organizational prowess in the startup community, driving growth and collaboration between leading startups and the host university.
